### **DETAILED ACTION**

1. This application has been examined. Claims 1-13 are pending.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Sauter (Figures 14 and 15). In particular note the valve body, a top plate 57c, a bottom plate 34C and an adjustment member 42C "...wherein movement of the adjustment member changes the relative position of the top plate and the bottom plate." (column 4, lines 37+). Whether the valve body or the plate 34C has a groove (as taught by Sauter) (Figure 14) (formed by hinged arms 38C and 39C) is deemed design choice and given no patentable weight. Restriction of rotational movement of the valve body is prevented in either case. The adjustment member includes a slot (tool mating portion) (claims 5 and 6) to accommodate a screwdriver. The bottom plate 34C is internally threaded. With regard to claim 13, two adjustment members 42 and 43 are shown.

#### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
